

Painful Heel?

Do you suffer from a painful heel?
Then you might qualify to participate in a
study investigating the safety and
effectiveness of Shock Wave Therapy for
this chronic orthopaedic condition.

Manhattan Beach, December 2002: Radial shock wave therapy with the EMS DolorClast® is a new, non-invasive treatment for painful heel. The safety and effectiveness of this treatment is now being evaluated in a controlled study being conducted under an Investigational Device Exemption granted by the Food and Drug Administration at the well-known West Coast Center for Orthopedic Surgery and Sports Medicine in Manhattan Beach, CA. **The principal investigators, Carol Frey, MD, and Keith Feder, MD, are now recruiting new patients for this study which is currently underway.**

If you suffer from chronic plantar fasciitis or a painful heel, you might qualify to participate in this exciting study.
